

# Plasmon-Empowered Nanophotonics: from Circuitry to Metasurfaces

*Tuesday, 30 August 2022 11:30 (30 minutes)*

Latest developments in nanophotonics associated with advantageous use of surface plasmon polaritons, hybrid excitations involving free electron oscillations in metals and electromagnetic fields in dielectrics, are overviewed. Special attention is given to the progress in ultra-compact photonic circuitry, including modulators and detectors, and plasmonic metasurfaces dynamically controlling propagation of light.

**Presenter:** BOZHEVOLNYI, Sergey (Centre for Nano Optics, University of Southern Denmark, Odense M, Denmark)

**Session Classification:** FWD 1 Planar waveguide devices
