

# Optical emission characterization of liquid core fibers filled with colloidal nanoplatelets

*Tuesday, 30 August 2022 12:00 (2 hours)*

Solution-processed nanoplatelets exhibit exciting optical properties which can be exploited for lasing in novel spectral ranges. Here, we incorporate these nanoplatelets in capillary fused silica fibers and investigate their optical properties. These results are the basis for a novel class of solution-processed nano-material fiber lasers.

**Primary authors:** SPELTHANN, Simon (Leibniz University Hannover, Institute of Quantum Optics, Hannover, Germany); LARS F. KLEPZIG, Lars F. (Leibniz University Hannover, Institute of Physical Chemistry and Electrochemistry, Hannover, Germany); DAN HUY CHAU, Dan Huy (Leibniz University Hannover, Institute of Quantum Optics, Hannover, Germany); MARIO CHEMNITZ, Mario (Leibniz Institute of Photonic Technology, Jena, Germany); JUNAID, Saher (Leibniz Institute of Photonic Technology, Jena, Germany); RONJA STEPHAN, Ronja (Leibniz University Hannover, Institute of Quantum Optics, Hannover, Germany); KATHARINA HAUSMANN, Katharina (Leibniz University Hannover, Institute of Quantum Optics, Hannover, Germany); MARKUS A. SCHMIDT, Markus A. (Leibniz Institute of Photonic Technology, Jena, Germany); JANNIKA LAUTH, Jannika (Leibniz University Hannover, Institute of Physical Chemistry and Electrochemistry, Hannover, Germany); MICHAEL STEINKE, Michael (Leibniz University Hannover, Institute of Quantum Optics, Hannover, Germany); DETLEV RISTAU, Detlev (Leibniz University Hannover, Institute of Quantum Optics, Hannover, Germany)

**Presenter:** SPELTHANN, Simon (Leibniz University Hannover, Institute of Quantum Optics, Hannover, Germany)

**Session Classification:** Lunch and Poster Session 1
